About California Trace

California Trace is a concentrated trace mineral supplement designed for horses on west coast forage diets. In addition to the balanced trace minerals, each serving contains biotin, vitamin A, vitamin E, lysine and methionine. **California Trace** supports optimal hoof growth and healthy coats that resist sun bleaching and fading.

A common comment from customers after just a few months of feeding **California Trace** is that their horses seem to "glow." It's not unusual to see the incidence of skin problems and allergies decrease over time while feeding **California Trace**.

California Trace is a convenient, pelletized product. Do NOT feed **California Trace** with any other supplements containing selenium.

If a commercial grain mix is fed, the daily serving of **California Trace** may be adjusted.

For best results, add 1/2 cup of ground flax daily in addition to **California Trace**. A small amount of

moistened beet pulp or hay pellets makes a good carrier.

California Trace has been formulated to save horse owners money over similar products.

God forbid that I should go to any Heaven in which there are no horses.
—R.B. Cunninghame Graham, letter to Theodore Roosevelt, 1917
